

ID Energy Group to develop one of the largest photovoltaic farms in Spain

The plant will be located in Villarrobledo, province of Albacete, and will boost employment and wealth in the town

Madrid, 14 July 2022 - Benito Javier Puebla, CEO of ID Energy Group, and his team have met several times with the mayor, Simón Valentín Bueno Vargas, and third deputy mayor, Amalia Gutiérrez Serrano, of this town in Albacete. Their latest meeting took place this week, and both Benito and his colleagues are very grateful for the help and interest of local council members.

The project being developed by the company will integrate several renewable generation technologies, thus helping the farm to generate an available energy supply almost 24 hours per day. This innovative feature will make the energy project a benchmark in Europe.

One of the aims of this type of investment is to create employment for members of the local community. It will also increase wealth in the area and is proof of ID Energy Group and the local town council's commitment to sustainability, the environment, and the fight against climate change.

About ID Energy Group:

Since it was founded in 2008, ID Energy Group — a corporate group specialising in photovoltaic energy — has grown both in Spain and further afield, and is now one of the most important players in the renewable energy sector.

It now has more than 140 employees and a strong international presence, with offices in Spain, Poland, Hungary, Croatia, and Serbia. What's more, the company is currently breaking into the Italian market.
